

TruPortal™ Access Control

2-Door Base System

OVERVIEW

TruPortal offers an IP Appliance-Based Access Control System integrated with the TruVision® line of video products. Designed for the over-the-counter market, this solution is also ideal for small- to medium-sized commercial buildings. The easy-to-install system features a browser-based interface that does not require specialized training, additional software or licensing. A companion iPad® app enables users to remotely monitor system activity and perform basic administrative tasks, such as adding or deleting users. Plus, mobile users of the native iPhone® or Android phone application can perform the most common command and control functions including email, video and reports direct from their phone.

The system with its onboard Web server supports up to 5 simultaneously, real-time information, event monitoring and video integration. A user-friendly interface, online help files, built-in tool tips, intuitive searching and flexible reporting methods all ensure a frustration-free user experience. The interface is available in the following languages: English, Dutch, French, Spanish, Portuguese, Finnish, Italian, Turkish, Swedish and German.

TruPortal also allows hardware interfacing with up to 132 digital inputs for unlocking doors in case of emergency, while pre-configured roll-call reports enable easy verification of persons still on the premises. Analog and IP video is provided via integration with the TruVision line allowing for in-browser video verification and alarm tagging.

End-user administration of the system is made easy with built-in wizards that guide the administrator through the different setup screens, as well as items like Access Levels, Schedules, Holidays and Reader Lists. The access control database features 10 customizable user-defined fields. Multiple levels of operators can be configured, with five levels incorporated by default.
