

MKP-150

Two-way wireless keypad with voice

The MKP-150 is a two-way wireless keypad for PowerMax®+ and PowerMaxPro systems. Once installed and programmed, the keypad provides all of the controls, notifications, indications and voice prompts of the control panel.

The MKP-150 employs Visonic's two-way wireless secured communication protocol and provides both audible and visual feedback including voice prompts as it carries out the operator's commands to the control panel. Conveniently, the MKP-150 can be used to arm or disarm the system, turn lights on and off, control electrical appliances and much more.

The MKP-150 can be placed in a convenient, easily-accessible location, enabling the control panel to be installed in a location inaccessible to intruders. In case of tampering or sabotage, an alarm sounds and the event is recorded by the control panel.

Owners can also install a second keypad in the garage, pool house, or at bedside for convenient arming and control before going to sleep. ®

The MKP-150 keypad is available in several optional frequencies in compliance with European, U.S. and other international standards.

MKP-150 features:

- Compatible with PowerMax+ and PowerMaxPro systems
- Provides all of the same controls, notifications, indications and voice prompts of the control panel.
- Used to arm or disarm the system, turn lights on and off, control electrical appliances and much more
