## Product

## GSM-100

### External GSM adaptor for PM+ / PMPro

The GSM-100 Cellular Communication Module connects to the PowerMax®+ or PowerMaxPro system via standard GSM cellular network. It is recommended for every home as a backup communication line in case of line failure or tampering with standard telephony lines. In addition, it supports remote operation and event reporting via SMS.

The GSM-100 is a must-have for any property without land-based telephone lines, extending full PowerMax®+ functionality to properties such as homes with VoIP internet based telephony, anchored boats and isolated vacation houses.

The module can be installed in a concealed or remote location, ensuring signaling in case of tampering with the system. The integrity of the backup communication channel is ensured through continuous monitoring.

### GSM-100 Features

- Recommended for every home as a backup communication line in case of line failure or system sabotage.
- Event reporting and remote operation through SMS
- Can be installed in a concealed or remote location to ensure alert notification in case of tampering with the system
- Remote PM+/PMPro programming and control over GSM data channel
- Continuous monitoring of channel integrity and "signal loss" detection
- Supports SIA and contact ID monitoring protocols
- Tamper alert issued in the event of transmission jamming, communication breakage with the PowerMax®+, removal of cover or prying from the wall.
- Rechargeable batteries supplying up to 24 hour backup
- Supports two-way voice communication
- Supports QUAD band frequencies for worldwide coverage
